

Policy implications of using blockchain in cultural policymaking

Saeed Ashiri¹ Seyyed Mohammad Hossein Hashemian² Asghar Islami Tanha³

Abstract

Blockchain is a disruptive technology and at the frontiers of innovation, and the development of blockchain application has various effects and consequences on the public space and cultural policy. Recognizing the blockchain based on philosophical foundations and then the cultural theory appropriate to this technology will make it possible to design the blockchain doctrine and its policy implications. In this article and in accordance with the blockchain problem system in cultural policy making, a set of policy implications are expressed in three cultural, managerial and knowledge approach. In conclusion and summary, four blockchain policymaking approaches have been proposed, regulatory, collaborative, intervention and innovative approaches.

Keywords: blockchain, policy implications, cultural policymaking, cyber space.
